“This is a loudspeaker, but this is also a lightweight sound blocking materials and a silencer!”

**Improved Listening Experience**

**SOUNDRELIEF** is an active soundproofing concept that acts as a noise-breaker. It is composed of loudspeakers electronically controlled to damp the sound energy coming from the noise source. With such an innovative technology, quiet listening zones could be achieved within noisy environments.

Towards a mastery of sound fields

- A *slim sonic defence* that outperforms heavy concrete walls
- Active sound insulation between adjacent listening spaces
- Allows removable walls/panels to effectively block loud music
- Outstanding low-frequency performance
- Overall improvement of sound rendering
- Low-power electronics
