

Kristian Gerhard Jebsen Program – SV / EPFL

Call for innovative projects in the field of nutrition and metabolism

School of Life Sciences / EPFL

Funding through the current call will encourage individual projects that involve EPFL scientists, or collaborations between EPFL scientists and researchers elsewhere in the world. This call will also favor collaborative projects that cross boundaries between nutrition/metabolism and engineering or medicine, or projects that develop or apply a systems approach to the study of nutrition and metabolism. In order to strengthen the scientific community actively performing research on this important topic, another aim is also to attract scientists from other fields towards nutrition/metabolism-related questions. We also expect that projects funded through the Kristian Gerhard Jebsen Program will have the potential to continue through other funding beyond the current program's timeframe.

- 1 to 5 successful proposals will be funded depending on the quality of the proposals.
- Duration of the projects: 2 years
- Maximum amount (direct costs) is indicated below:

	1 st year	2 nd year	Total
1 Lab / 1 Principal Investigator	62 kCHF	62 kCHF	124 kCHF
2 Labs / 1 Principal Investigator + 1 Co-Applicant	124 kCHF	124 kCHF	248 kCHF

- Submission: June 4th, 2015
- Possible starting date: September 1st, 2015

We expect that this startup funding initiative will create a snowball effect: groups that have been able to initiate a project thanks to the Kristian Gerhard Jebsen Program will seek further financial support through other funding programs to continue to work on these topics.

Successful applicants in 2015 will also be eligible to reapply at the next call.

The application Form is provided separately.
